## EDUCATION

|                                                                              |                             |
|------------------------------------------------------------------------------|-----------------------------|
| <b>GD Goenka University</b><br><i>B.Tech in Computer Science Engineering</i> | Gurugram, HR<br>2020 – 2024 |
| <b>Kalinga University</b><br><i>Diploma in Computer Science Engineering</i>  | Raipur<br>2018 – 2020       |

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------|
| <b>Data Engineer &amp; AI Tools</b><br><i>COFORGE LIMITED</i>                                                                                                                                                                                                                                                                                                                                                                                                    | 2024 – Present                       |
| <ul style="list-style-type: none"><li>– Built and optimized <b>ETL pipelines</b> using <b>Azure Cloud</b> for scalable data processing.</li><li>– Performed data extraction, transformation, and analysis using <b>SQL</b> and <b>Python</b>.</li><li>– Designed <b>Power BI dashboards</b> to present insights and support business decisions.</li><li>– Used <b>AI tools and automation</b> to improve workflow efficiency and reduce manual effort.</li></ul> |                                      |
| <b>Campus Ambassador Intern</b><br><i>WAYSPIRE</i>                                                                                                                                                                                                                                                                                                                                                                                                               | Apr 2024 – June 2024<br>Gurugram, HR |
| <ul style="list-style-type: none"><li>– <b>Organized</b> 10+ events, <b>increasing</b> participation by <b>30%</b>.</li><li>– <b>Boosted</b> engagement by <b>50%</b> through social media strategies.</li><li>– <b>Enhanced</b> brand awareness by <b>40%</b> via campus outreach.</li></ul>                                                                                                                                                                    |                                      |
| <b>Web Developer</b><br><i>INNOBYTE SERVICES</i>                                                                                                                                                                                                                                                                                                                                                                                                                 | Feb 2024 – Apr 2024<br>Delhi, HR     |
| <ul style="list-style-type: none"><li>– Developed responsive UI using <b>React, HTML, CSS, JavaScript</b>.</li><li>– Implemented <b>Tailwind CSS</b> for modern and responsive design.</li></ul>                                                                                                                                                                                                                                                                 |                                      |

## PROJECTS

|                                                                               |                     |
|-------------------------------------------------------------------------------|---------------------|
| <b>VPN Website</b>   <i>React, JavaScript, HTML, CSS</i>                      | Feb 2024 – Apr 2024 |
| – Converted Figma designs into responsive web applications with modern UI/UX. |                     |
| <b>Plant Disease Classification</b>   <i>Python, TensorFlow</i>               | Mar 2023 – May 2023 |
| – Built ML model with 92% accuracy for disease detection using deep learning. |                     |

## TECHNICAL SKILLS

**Data Engineering:** ETL Pipelines, Data Processing, Data Cleaning, Data Modeling  
**Languages:** Python, SQL, JavaScript, C/C++  
**Cloud & BI:** Microsoft Azure, Power BI  
**Frameworks & Tools:** React, Node.js, Git, Docker, JIRA, VS Code  
**Libraries:** Pandas, NumPy, TensorFlow, Scikit-learn

## CERTIFICATES AND ACHIEVEMENTS

**IBM:** Agile Development and Scrum  
**Udemy:** Project Management  
**NPTEL:** Computer Networks, Operating Systems  
**SkillUp:** Frontend Development, ReactJS
